Laser Hair Removal

Smooth and silky in a few effective visits

Try our state-of-the-art laser hair removal system for a fast, safe and long-lasting solution to unwanted hair.

PERSONA
MED-AESTHETIC CENTRE

Unwanted facial and body hair can be a never-ending nuisance for both men and women.

Traditional hair removal methods, such as shaving and waxing, can be time-consuming and painful and will always be just a temporary fix.

Get to the root of the problem with Persona's state-of-the-art laser hair removal system, for the fastest, most effective permanent hair reduction.

Is laser hair removal suitable for me?

Our state-of-the-art laser removes unwanted hair from all areas of the body, and parts of the face. Thanks to its dual wavelength technology, every skin type, even darker complexions, can be treated with the highest degree of safety and efficacy. Since the laser light is absorbed by the pigment or colour in the hair, results are best with darker hair.

Which areas of the body can be treated?

Laser hair removal is suitable for both men and women, and can be performed on a variety of face and body areas. These include the upper lip, chin, sides of face, cheeks, nostrils, ears, beard, neck, underarms, shoulders, arms, back, chest, areolae, abdomen, navel line, pubic area, buttocks, legs, feet, fingers and toes.

Is it painful?

Discomfort is minimal and most people tolerate the procedure well. Our unique, award-winning*, air cooling system, provides the safest, most comfortable laser treatment. Bear in mind however, that some areas can be more sensitive than others.

Are there any side effects?

Although slight redness or localised swelling may occur in some cases, this usually subsides within 24 hours. Our epidermal air cooling system significantly reduces the risk of potential side effects.

What precautions should I take before and after the procedure?

Prior to the procedure, avoid sunbathing for four weeks, and use an SPF50+ sunscreen on exposed areas at all times when outdoors. Do not wax, pluck or bleach hairs or have electrolysis. It is important to shave the area that is to be treated the evening before the procedure. On the day of treatment, do not apply any creams, make-up, deodorant or perfume. After the procedure, avoid sun exposure and continue using an SPF 50+ sunscreen when outdoors.

* as rated by Aesthetic Trends and Technologies magazine.

How many sessions will I require?

On average, four to eight treatments are needed for successful permanent hair reduction. The number varies, depending on several factors such as the part of the body being treated, skin tone and hair colour. Prior to the procedure, our doctor will talk you through the variables that may influence your personal requirement.

How often will I need the treatment?

This depends on the area being treated. Body hair removal sessions are usually spaced six to eight weeks apart, while facial hair removal sessions are closer.

How long does the procedure take?

Procedure time varies depending on the type and size of the area being treated and the amount of hair. The quickest procedures are those treating the face, taking just 10-15 minutes. Other areas, such as legs, chests and backs, generally take longer.
